DRIVER USER MANUAL

MAIN INTERFACE INSTRUCTIONS

Select the feature you want to customize or configure on the keyboard config menu located on the left side of the interface.

Under this menu you will find the preview mode button, switch it on if you want to see all the changes in real time.

On the right part of the interface you can enable/disable the windows key

Finally on the bottom part you will find the profiles and the reset and save buttons to revert or store all the changes made.

Switch on G-mode key to activate Button Configuration in the Driver.

CUSTOMIZE LAYOUT INSTRUCTIONS
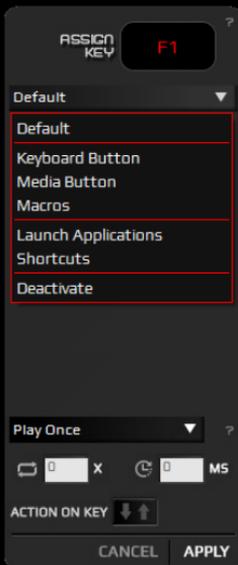

To change the assignment of any key of the keyboard just click on one of them and a submenu will pop up. You have many options to set different behaviors to a key (Default, keyboard button, media button, macros, launch applications, shorcuts or deactivate it) You can select the desired option in the dropdown menu.

On the bottom part of this submenu, you also have different options for the key interaction. You can adjust the cycles, delays or the actions on key.

Once you are done you can cancel the changes or apply it to the selected key.

Keyboard Button

Push the rec button and enter a new key or a combination of your choice (like ctrl+1 for example) to assign it.

Media Button

Actions to control the playback of your music player, you have all the basic buttons which by default are also on the keys above the arrows, to use these keys you must use hold down the function key (for more information, see page 5).

Macros

Assign a previously recorded macro to the selected key. We will see later how to use the macro editor and the different types of macros you can create.
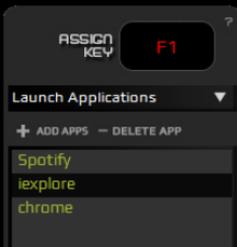

Launch Applications

Click on Add apps to open the windows explorer and search for the application you want to launch pressing the selected key. Click on delete app if you want to delete it from the list.

Shorcuts

In this submenu you can find a bunch of typical actions to perform and help you with your workflow, navigation and desktop organization.

Deactivate

Deactivate a key if you don´t want to use it.

Key Lighting FX

This submenu allows you to customize the ligthing of your keyboard. In the first dropdown menu you can select the light fx.
Some of them have more options to customize like the color, spectrum mode or the speed control slider.
You can also check the "disable lights" box if you don´t want to have the keyboard lit.
Under this submenu is the brightness slider to set the level of the brightness you prefer.

KEY LIGHTING FX

LIGHT FX | CUSTOM ▼

◉ CUSTOM COLORS

☐ GLOBAL COLOR

☐ DISABLE LIGHTS

Custom Light Fx

When you select the custom light Fx you can color each key of the layout individually. Just select a key and pick on the custom colors color selector and the key will change colors. If you hold Ctrl and click in another key, it will be colored in same color as the last one. You can make specific game color map profiles to only light up the keys you usually use in the game.

MACRO LAB INSTRUCTIONS

When you click on macro lab you can choose between creating a keypress macro or a text macro.

Keypress macros

To create a new macro click on **add macro** and name it.
Then click on **start rec** and begin to push all the keys you want to store in the macro, when you finish click on **stop rec.** You can edit the macro you just made by right clicking on any input of the macro.
You can also record the delay between keys clicking on the **record delay** box.
Finally you can click cancel or save the macro.
The stored macros will appear in the **customize layout macro submenu** that we explained in page 14.

Text macros

To create a new (text) macro click on add macro and name it.
Then write the text you want to store in the box.
You can record a start and an end key and input the delay for the text macro.
Finally you can click cancel or save the macro.
The stored macros will appear in the customize layout macro submenu that we explained on page 14.

PROFILE INSTRUCTIONS

When you click on the cogwheel next to the active profile on the bottom of the interface a new profile configuration window will pop up.
You can add an application to run the selected profile when it starts, it helps you to have different profiles and run each one only when the selected app is running, one for every game you usually play.

You can also copy the settings to another profile to save time or reset to default settings.

As usual you can cancel the changes or apply them.
